Passionate university student with a strong affinity for technology and a commitment to self-improvement. Currently studying at Istanbul Technical University, I've taken the initiative to expand my knowledge beyond the classroom. My skills encompass a range of tools and languages, including Adobe Photoshop, Adobe Premier Pro, Adobe Illustrator, HTML, CSS, JavaScript, PHP, and Java.

During my journey, I have worked on several LARAVEL web development projects and creating a back-end program for efficient employee information management with Java. Additionally, I've embarked on exciting projects, such as developing a Snake game for Android smartphones using Android Studio. In addition to my academic pursuits, I hold an ICDL certificate, further validating my proficiency in digital skills.

From an early age, I've been captivated by computers and emerging technologies. Recognizing the need for continuous improvement, I've taken the initiative to learn Java and C++ independently. My love for this field is evident in my dedication to honing my skills, and I am excited to embark on a career path that aligns with my passion for technology.
